Asia and Pacific Regional Economic Outlook

This report gives the IMF's view of the outlook for Asia, identifies the main risks to growth, and considers the key factors that will influence capital inflows. The REO also discusses short-run macroeconomic policy issues for the region, as well as longer-term challenges, including the need to raise consumption and rebalance growth, develop further regional financial and capital markets, and address growing income inequality.

Contents: Definitions Executive Summary I. Recent Developments and Outlook Growth Inflation External Sector Risks II.
