Growth accelerated in the districts of the New York and Richmond Fed banks, but slowed from a high level in the Dallas region and was mixed in the Atlanta district, the Fed said in its Beige Book summary of economic conditions.

The Beige Book is composed of reports from the areas covered by each Fed bank.

A number of districts reported tight labor market conditions, especially for high-skilled occupations, the Fed said. At the same time, wage growth remained moderate and most districts reported that prices had moderated for construction materials and energy products.
